

## ABSTRACT

In a card-type magnetic recording device (1), a head arm (14) adopts a swing arm structure in the shape of a flat plate. The head arm (14) has a guide arm (27) projecting toward the side opposite to a disk (2) and is arranged at a distance from a load ramp (15). The projecting end (29) of the guide arm (27) remains behind the load ramp (15) at a position where the end mounted with the head (26) in the head arm (14) is disengaged from the load ramp (15).
